# Elektroninis paštas

15. Pasirinkite **Use the same settings as my incoming mail server.**

16. Pasirinkite **Advanced** kortelę.

The screenshot shows the 'Advanced' tab of the Outlook mail client settings. It is divided into three sections: 'Server Port Numbers', 'Server Timeouts', and 'Folders'. In the 'Server Port Numbers' section, the 'Incoming server (IMAP)' port is set to 143, and the 'Outgoing server (SMTP)' port is set to 587. Both sections have a 'Use Defaults' button and a dropdown menu for 'Use the following type of encrypted connection', which is currently set to 'None'. The 'Server Timeouts' section shows a slider for 'Short' and 'Long' (set to 1 minute). The 'Folders' section has a text box for 'Root folder path'.

- Jei naudojate POP3 protokolą **SMTP** prievado reikšmė - **587**, **POP3** - **110**. Kai kurie interneto tiekėjai blokuoja **587** prievadą, todėl Jums reikia kreiptis pas tokį tiekėją ir paklausti kokia turi būti **SMTP** reikšmė.
- Jei naudojate **IMAP** protokolą - nurodykite **143** prievadą.

[Nežinote ką naudoti IMAP ar POP3?](#)

17. Paspauskite **OK**.

18. Kol esate **E-mail Accounts** lange, paspauskite **Test Account Settings** mygtuką.
